EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christopher Sappenfield on 23 March 2004.

In claim 48, line 1, "and" has been deleted and --or-- has been substituted therefor.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The closest prior art is Terret (reference AA in the PTO Form 1449 filed 14 March 2002. Terret reviews split and pool combinatorial library methods at the time of filing of the instant application. In figure 2.8 Terret show that prior art methods utilize random pooling of all beads between reactions. Terret shows that a disadvantage of split and pool methods is that the final mixtures must be deconvoluted to determine the identity of an individual member of the library. The claimed combinatorial library synthesis method, exemplified in the instant figure 1, is distinguished from the prior art at least by use of solid phase synthesis units (which may comprise multiple beads, etc.) that are not randomly pooled between the synthesis steps. Sufficient solid phase synthesis units are used to allow for the full complexity of the library to be achieved. The final reaction vessels each comprise a subset of the total library complexity. This reduced complexity

facilitates identification of the structure of each member by directly determining physical properties of each final solid phase synthesis unit. The claimed method excludes identification by deconvolution (e.g., by assaying the final subsets of the library, determining the subset pool that has activity, synthesizing each member of that subset pool, and assaying each member of the selected subset pool for activity). The claimed method is open to but does not require tracking of each solid phase synthesis unit during the method, but information of the group added in the last reaction vessel can optionally be used to facilitate identification, as in claim 19.

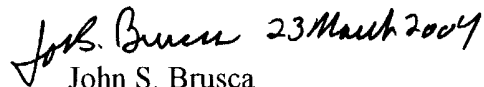

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
